JUVENILE-COURT STATISTICS, 1931

THE COOPERATING COURTS

The report on juvenile-court statistics for 1931 is the fifth annual report based on data supplied by courts cooperating with the Children's Bureau in the plan for obtaining uniform statistics of delinquency, dependency and neglect, and other children's cases dealt with by juvenile courts.

During that year reports of cases of children dealt with by the juvenile courts were received from all the courts in Connecticut (89 courts) and Utah (8 courts) and from 71 courts in 21 other States and the District of Columbia. The State of Connecticut was added to the reporting area, and several other changes occurred in the list of cooperating courts. Five courts serving areas with more than 100,000 estimated population¹ and 3 serving a somewhat smaller group² were added, and 18 courts serving areas with smaller populations discontinued reporting. These changes are in accord with the program of the Children's Bureau to encourage State-wide reporting through a State agency, usually the department of public welfare, and to continue to develop the reporting to the Bureau of individual cases only from courts serving large urban communities, which report in greater detail than the States are prepared to request from all courts, at least at present.

The courts now reporting to the Bureau serve about one fifth of the population of the United States. During 1931 they submitted facts regarding 59,880 delinquency cases, 22,317 dependency and neglect cases, 1,116 cases of other types over which the courts had jurisdiction, and 17,356 cases of children who had been discharged from supervision after a period of probation or supervision.

The tables included in this report are of two types: Summary tables, combining the figures for all courts, and source tables, giving facts in regard to the cases reported by individual courts. In previous years all the courts reported information for each case on a card, which made possible the correlation of any items reported. In the State plan for reporting used in Connecticut, summary tables are prepared by the courts, and a consolidated table showing figures for all courts is sent to the Children's Bureau. Figures for Connecticut, exclusive of Bridgeport, which reported cases on individual cards, could be used, therefore, in only those summary and source tables that present such basic facts in delinquency and dependency and neglect cases as the age and color of the child, the reason for reference to the court, and the disposition and manner of dealing with

¹ San Francisco County, Calif.; Dade County, Fla.; Orleans Parish, La.; Syracuse, N.Y.; and Fayette County, Pa.

² La Salle County, Ill.; Muskegon County, Mich.; and Kenosha County, Wis.

the case by the court, and, in cases dismissed from supervision, the reason for discharge and the length of time under supervision.

The source tables (pp. 37 to 59) present details as to the cases reported by the 43 courts that were serving areas of 100,000 or more population. In these tables cases reported by courts serving less populous areas are combined and reported as one unit.³ Consolidated figures for the entire State are also made available for Utah and in some instances for Connecticut. Two of the courts (Hudson County and Mercer County, N.J.) serving areas of 100,000 or more population did not report cases of dependency and neglect. Hartford and New Haven, Conn., were not included in all source tables, as the courts in these cities did not report their cases on cards.

DELINQUENCY CASES

TRENDS IN JUVENILE DELINQUENCY

Delinquency rates, based on the number of delinquent children referred to the juvenile court per 10,000 children of juvenile-court age of the same sex, have been calculated for courts serving areas of 100,000 or more population that reported cases on cards to the Children's Bureau during 1931. Rates for each court have been prepared for each year that the court reported cases since the effort to promote uniform statistics began in 1927. (See table 3.) Nineteen courts⁴ have reported each year of the 5-year period. During this time progress has been made toward uniformity in reporting, and it is possible to reach some conclusions as to trend in juvenile-court delinquency rates from these courts.

The trend of the rates for boys was upward from 1927 to 1930 (162 in 1927, 174 in 1928, 183 in 1929, and 184 in 1930), but in each year of this period the percentage increase was less. The 1928 increase over 1927 amounted to 7 percent, the 1929 increase over 1928 was 5 percent, and the 1930 increase over 1929 was less than 1 percent. This slowing up in the percentage increase to a point where it is negligible between 1929 and 1930 was followed by a definite drop in the rate in 1931 (172), which amounts to 7 percent decrease from the preceding year. For the 18 courts reporting girls' cases the delinquency rates for girls show the same general tendency. There was an upward trend from 1927 to 1929; the 1930 rate was the same as that of 1929, and the 1931 rate definitely lower than that of 1930.

Analysis of the ages of the children whose cases were reported by these courts shows that the decrease in rates in 1931 from 1930 was largely due to a decrease in cases of children under 14 years of age. Table 1 gives information as to the number of cases of children of different ages dealt with by these courts in 1930 and in 1931 and shows the percent of change in cases from 1930 to 1931 in the different age groups. The decrease in cases of boys under 10 years of age amounted to 18 percent, the percent of decrease becoming progressively smaller in the older age groups. In girls' cases a decrease was found in each age group, except for those under 10 years of age, the largest decrease (16 percent) being in cases of girls 12 and 13 years of age.

³ The name of the principal city in the area served by each of the 43 larger courts is given in appendix table A, and the name of the principal city in the area served, and the number and type of cases handled, by the smaller courts is given in appendix table B.

⁴ Bridgeport, Conn.; District of Columbia; Lake County and Marion County, Ind.; Hennepin County and Ramsey County, Minn.; Hudson County and Mercer County, N.J.; Buffalo, Erie County, New York City, and Westchester County, N.Y.; Franklin County, Hamilton County, and Mahoning County, Ohio; Montgomery County and Philadelphia, Pa.; Norfolk, Va.; and Pierce County, Wash.

TABLE 1.—Age of boys and girls when referred to court in 1930 and in 1931 and percentage change in 1931 as compared with 1930; boys' and girls' delinquency cases disposed of by 19 courts ¹ reporting throughout the period 1927-31

¹ Only 18 courts reported girls' cases.

² Includes only official cases for Franklin County, Ohio.

³ Percentage change not shown because the age of original jurisdiction for these courts was under 18 years, although a few children above this age were dealt with.

Table 2 gives the reasons why boys and girls were brought before these courts in the different years. A large part of the decrease in total cases in 1931 as compared with 1930 was due to reduction in the number of boys' cases classified as "acts of carelessness or mischief", "truancy", or "ungovernable," and in cases of girls referred for truancy, being ungovernable, or sex offense. This decrease in cases of being ungovernable and in girls' truancy cases began in 1930; in boys' truancy cases the decrease began in 1929. Stealing, the most common offense for which boys are referred to the court, and the one that would be expected to show the effect of economic conditions, increased each year from 1927 to 1931. Although the percentage increase (2) in stealing from 1930 to 1931 was smaller than in previous years, it is significant because of the drop in total cases in 1931. Another significant increase, continuous since 1929, was in cases of boys who had run away. There was a decrease rather than an increase in 1931 in cases of girls charged with stealing and running away. Changes in the number of cases of other types of offenses are less significant because of the smaller number of such cases. The increase in 1931 of cases of children charged with the use, possession, or sale of liquor or drugs, although the number of cases is small, is of interest.

Conditions in particular localities, or changes in the policies, practices, or services of a few courts, may have a marked influence upon their combined figures. For example, in 1931 the increase in cases of boys running away was due largely to increases in such cases in Hamilton County, Ohio, New York City, and Philadelphia, Pa.; the largest drop in truancy cases was reported by Hudson County, N.J.; and the decrease in cases involving acts of carelessness and mischief, and traffic violations, was affected by the marked drop in such cases in New York City.

Juvenile-court delinquency rates are given in table 3 for each year that cases were reported, for the 41 courts serving areas of 100,000 or more population reporting boys and girls dealt with in delinquency cases during 1931. The delinquency rates for boys and for girls fluctuate from year to year in the different courts. The general trend in rates for this larger group of courts was the same as for the 19 courts.

TABLE 2.—Reason for reference to court and percentage change as compared with previous years; boys' and girls' delinquency cases disposed of by 19 courts¹ reporting throughout the period 1927-31

¹ Only 18 courts reported girls' cases.² Includes only official cases for Franklin County, Ohio, as unofficial cases were not reported in previous years.³ Percentage change not shown where number of cases was less than 50 or where information was not available.⁴ Includes traffic violators (511 boys and 11 girls in 1930; 565 boys and 18 girls in 1931). Number not reported separately in previous years.⁵ Less than 1 percent.

Only 9⁵ of the 36 courts reporting for 1930 and 1931 had higher boys' rates in 1931 than in 1930. The percent of increase in rates varied from 2 in the District of Columbia to 46 in Milwaukee County. In 2 of these courts, however—District of Columbia and Multnomah County, Oreg.—the difference in the rates was too small to be statistically significant. This marked increase in Milwaukee was due largely to closer cooperation between the court and the police department, and between the court and the district attorney's office. As a result, every juvenile case coming to the attention of the police was referred to the juvenile court, and a number of boys that previously would have been sent to other courts⁶ were referred to the juvenile court. Boys' rates in 27 courts were lower in 1931 than in 1930; in 16 courts⁷ the decrease was statistically significant.

The rates for girls for the same courts are also given in table 3. In 11 courts the girls' rates were higher in 1931 than in 1930, but

⁵ District of Columbia; Baltimore, Md.; Hennepin County, Minn.; Buffalo, and Monroe County, N. Y.; Hamilton County, Ohio; Multnomah County, Oreg.; Third District, Utah; and Milwaukee, Wis.⁶ Circuit courts in Wisconsin have concurrent jurisdiction over delinquents of 16 years or over.⁷ San Diego, Calif.; Fulton County, Ga.; Lake County and Marion County, Ind.; Polk County, Iowa; Caddo Parish, La.; Wayne County, Mich.; Ramsey County, Minn.; Hudson County, N. J.; New York City, Rensselaer County, and Westchester County, N. Y.; Mahoning County, Ohio; Allegheny County and Philadelphia, Pa.; and Pierce County, Wash.

because of the small number of girls' cases, the increase in only 1 court (Mercer County, N.J.) was statistically significant. Twenty-three courts had lower rates for girls in 1931 than in 1930; in 10 of these ⁸ the decrease in rate was significant. The girls' rates in Hennepin County, Minn., and in Milwaukee County, Wis., were the same in 1930 and 1931.

¹ Courts reporting in 1931 that reported in 1 or more years during the period 1927-31.

² Based on official cases only, as unofficial cases were not reported in previous years.

The rates in different localities varied widely in 1931. Rates based on the number of boys referred to the courts serving areas with 100,000 or more population varied from 454 in San Diego County, Calif., to 15 in Fayette County, Pa., the rate for these 41 courts

⁸ Lake County and Marion County, Ind.; Polk County, Iowa; Caddo Parish, La.; Wayne County, Mich.; Hudson County, N.J.; New York City and Westchester County, N.Y.; Allegheny County, Pa.; and Third District, Utah.

combined being 176; girls' rates varied from 117 in Mahoning County, Ohio, to 4 in Fayette County and Montgomery County, Pa.⁹, the rate for the 41 courts combined being 32.

A number of factors other than variation in the amount of delinquency influence these differences in rates. Important among these is the age limitation of original jurisdiction of the court. Evidence of this is to be found in table 4, which presents for all courts having higher age jurisdiction separate rates for the boys and girls under 16 years of age and for the total number of boys and girls brought before the court. The inclusion of older boys and girls affected the rates of some courts more than of others. The percentage difference was highest in courts having jurisdiction up to 18 years of age. In 3 of these courts (Ramsey County, Minn.; Norfolk, Va.; and Spokane County, Wash.) the rate for boys was more than 50 percent higher when the older boys are included, and in 7 courts (Hennepin County and Ramsey County, Minn.; Franklin County and Hamilton County, Ohio; Third District, Utah; Spokane County, Wash.; and Milwaukee County, Wis.) more than 50 percent higher for girls when the older girls are included. The percentage difference in rates of the two California courts, with original jurisdiction under 18 years and concurrent jurisdiction under 21, is about the same as in courts having jurisdiction under 17 years.

The delinquency rate of a court is also affected by the relative numbers of white and Negro children in the areas served. Rates have been calculated separately for white and Negro children for 14 courts that had reported to the bureau for 5 years serving areas in which 10,000 or more of the population were Negro. The rates for Negro children are consistently higher than for white children. (Table 5.) In 1931 rates for Negro boys were from slightly less than 2 to 4 times as large as the rates for white boys and for negro girls from less than 2 to more than 7 times as large as the rates for white girls. Rates for Negro boys in the 14 courts varied from 888 of every 10,000 of juvenile-court age in Mahoning County, Ohio, to 100 in Montgomery County, Pa., the rate for the 14 courts combined being 576; rates for Negro girls in 13 courts varied from 346 to 19, the rate for these 13 courts combined being 126.

Comparison of the rates for white children with the total rates for the same 14 courts, given in table 3, shows that the inclusion of Negro boys and girls had a much greater effect upon the total rate of some courts than of others. For example, rates for white and Negro boys in the District of Columbia and in Buffalo are comparable although not identical. The total rate for boys in 1931 in Buffalo (198) was only 5 percent higher than the rate for white boys, whereas the total rate in the District of Columbia (417) was 74 percent higher than the rate for white boys. This marked effect of the Negro rate upon the total rate in the District of Columbia is due to the fact that more than a fourth of the boys of juvenile-court age in the District are Negroes. The rates for boys in 4 other courts (Marion County, Ind.; Franklin County and Hamilton County, Ohio, and Norfolk, Va.) were increased from 22 to 30 percent by the inclusion of Negro boys.

⁹ The low rates in the Pennsylvania courts are partly due to the practice of taking many children before the police magistrates for preliminary hearing and decision as to whether their cases shall be referred to the juvenile court.

TABLE 4.—*Juvenile-delinquency rates per 10,000 boys and girls of juvenile-court age dealt with by courts having jurisdiction over 15 years of age and serving areas with 100,000 or more population in 1930; 1931*

¹ Age jurisdiction for boys under 16 years.² Based on official cases only.

Another significant factor to be considered in studying delinquency rates of individual courts is the extent to which the court is dealing with minor cases of delinquency as well as with those involving serious conduct problems. The number of cases dismissed by the court after a warning had been given or some adjustment made of the difficulty, or of cases held open without further action being anticipated, gives some indication of this situation, although some differences exist in the policies and procedures of the courts. In some courts children committing minor offenses may be placed under supervision of probation officers rather than be dismissed by the court. It is interesting to note that of the 16 courts serving areas of 100,000 or more population having a rate for boys of more than 200,¹⁰ all, with the exception of the court in Norfolk, Va., had dismissed or indefinitely continued from 35 to 73 percent of the cases referred. (See table VIIIA, p. 48.) Most of these courts reported a large number of unofficial cases. (See table VII, p. 47.) On the other hand, all but 2 (Mobile County, Ala., and Caddo Parish, La.)

¹⁰ Rates of more than 400: San Diego County, Calif.; District of Columbia; Mahoning County, Ohio; and Norfolk, Va. Rates of more than 300 but less than 400: Dade County, Fla.; Fulton County, Ga.; Baltimore, Md.; Multnomah County, Ore.; Philadelphia, Pa.; Third District, Utah; Spokane County, Wash.; and Milwaukee County, Wis. Rates of more than 200 but less than 300: Bridgeport, Conn.; Polk County, Iowa; Hudson County, N.J.; and Hamilton County, Ohio.

of the 12 courts having a rate of less than 100 ¹¹ had dismissed only 20 percent or less of their cases, 2 (Allegheny County and Montgomery County, Pa.) having no dismissals.

TABLE 5.—*Juvenile-delinquency rates per 10,000 white and Negro boys and girls of juvenile-court age jurisdiction dealt with by courts serving areas with 100,000 or more total population and 10,000 or more Negro population in 1930; courts reporting throughout the period 1927-31*

¹ Based on official cases only as unofficial cases were not reported in previous years.

The relation between the court and the police, the school department, and the social agencies will affect the number of children referred to the court and the juvenile-court delinquency rate. In some places all children arrested by the police are referred to the juvenile court, whereas in others the police themselves deal with many children, especially those committing minor offenses and violating traffic rules. The school department may deal with nearly all

¹¹ Mobile County, Ala.; San Francisco County, Calif.; Lake County, Ind.; Caddo Parish, La.; Erie County, Monroe County, and Westchester County, N.Y.; Allegheny County, Fayette County, and Montgomery County, Pa.; Greenville County, S.C.; and Pierce County, Wash. Franklin County, Ohio, was not included in this group, as the rate shown in table 3 does not include unofficial cases reported in 1930 and 1931.

truancy problems through its own agencies, or it may refer large numbers of attendance cases to the court.¹² If the school system includes such facilities for constructive work with problem children as a child-study department, visiting teachers, and well-trained attendance officers, it is probable that many cases, including other behavior problems as well as truancy, which would otherwise be dealt with by the courts, will be cared for by the schools.¹³ The extent to which agencies doing case work with problem children or their families are available in the community, and the place that the court holds in the estimation of social agencies and the public, also influence the number of children referred.

CHILDREN INVOLVED IN THE CASES¹⁴

The ages of the children before the courts as delinquents were reported by all of the 143 courts dealing with delinquency cases. Information as to the nativity of the child and his parents, the place where he was living when referred to the court, and the marital status of his parents, was available only for the cases dealt with by 79 courts that reported individual cases on cards.¹⁵

AGE

The maximum age of original jurisdiction of the 143 courts varied from under 16 to under 21. One hundred and one courts had jurisdiction over delinquent children under 16 years of age;¹⁶ 7 had jurisdiction under 17 years;¹⁷ 29 had jurisdiction under 18 years;¹⁸ and 2 had jurisdiction under 21 years.¹⁹ Of the remaining 4 courts, 2 (in Indiana) had jurisdiction over delinquent boys under 16 and delinquent girls under 18, and 2 (in Illinois) had jurisdiction over boys under 17 and girls under 18.

The extent to which the age limitation of original jurisdiction of the courts affected the number of cases dealt with is shown in table 6.²⁰ Cases of children under 16 years of age were reported by all the courts. Of the total number of cases of boys for whom age was reported, 41,664 involved boys under 16 years of age; 48 percent of these cases involved boys of 14 or 15 years of age, the largest number of cases being those of 15-year-old boys. The concentration of girls' cases in these age groups is even more marked, as in 65 percent of the cases of girls under 16 years of age the children were 14 or 15 years of age.

¹² In Mahoning County, Ohio, the probation office and the school-attendance department handle jointly a number of unofficial cases.

¹³ The practice in some jurisdictions of proceeding against the parents in cases of truancy reduces the number of children brought to court on that charge.

¹⁴ In 1927 and 1928 tables showing age and social characteristics of the children involved in the cases were based on individual children, not cases. A comparison of tables relating to social data based on "children" and on "cases" revealed no significant differences in percent distribution. All tables for 1929, 1930, and 1931, therefore, are based on "cases", each child being counted as many times during a year as he was referred on a new complaint.

¹⁵ Consolidated tables including all items on the cards are submitted by the court of Philadelphia, Pa.

¹⁶ Fourteen in Alabama, 65 in Connecticut, 1 in Georgia, 1 in Maryland, 2 in New Jersey, 11 in New York, 1 in North Carolina, 5 in Pennsylvania, and 1 in South Carolina.

¹⁷ One in the District of Columbia, 1 in Florida, 2 in Louisiana, and 3 in Michigan.

¹⁸ Two in Iowa, 3 in Minnesota, 8 in Ohio, 1 in Oregon, 8 in Utah, 3 in Virginia, 2 in Washington, and 2 in Wisconsin.

¹⁹ San Francisco County and San Diego County, Calif.

²⁰ The inclusion in the tables of a few cases of children beyond the age of original jurisdiction may be explained by the fact that some courts have jurisdiction beyond the age of original jurisdiction in certain situations; for example, a case in which the offense was committed before the age limit was reached, even though the case did not come to the attention of the court until afterward; and a case in which a child made a ward before reaching the age limit was brought before the court on a new complaint. Occasionally courts deal informally with children who are just beyond the age of juvenile-court jurisdiction.

In the courts having jurisdiction under 17 years of age more 15-year-old girls and boys had been referred to the court than children of any other age, the number of 16-year-old children being smaller. A different situation was found in the larger number of courts that have jurisdiction under 18 or under 21 years. In these courts cases of 16-year-old children (4,492) constituted the peak in cases of boys and girls reported, the number of cases of 17-year-old boys and girls (3,937) being smaller. The small number of cases of boys and girls of 18 years of age or over reported by San Diego and San Francisco, the only reporting courts having jurisdiction over children under 21, is undoubtedly affected by the fact that other courts have concurrent jurisdiction over cases of minors 18 years and older.

¹ Of the 113 courts only 139 reported boys' cases and 110 girls' cases.

² Includes truancy cases in Westchester and Rensselaer Counties, N.Y. (where jurisdiction to 17 years authorized by the State-wide education law is exercised).

³ Includes only San Diego County and San Francisco County, Calif.

In tables IIa and IIb (pp. 39 and 40), which give information as to the age of boys and girls reported by individual courts, may be found some interesting differences in the age distribution of cases reported from different localities. In some courts the number of younger boys dealt with was unusually large, particularly in the courts of Bridgeport and Hartford, Conn.; Baltimore, Md.; and Mercer County, N.J. All these courts have jurisdiction over children under 16 years of age, and cases of boys under 12 constitute about a third of the number of cases in which age of the boy was reported. The proportion of cases of girls under 12 was much smaller in all these courts. In 6 courts having jurisdiction under 18 years (Hennepin County and Ramsey County, Minn.; Norfolk, Va.; Pierce County and Spokane County, Wash.; and Milwaukee, Wis.) the number of cases of 17-year-old boys was particularly large, being practically identical or larger than the number of cases of 16-year-old boys. A similar relation between cases of 16 and 17 year old girls was found in all these courts with the exception of the 2 in Washington, and also in Lake County, Ind., and Milwaukee County, Wis.

Table 7 shows the difference in age distribution in cases of white and colored children reported by 78 courts. Children under 14 years of age were involved in 49 percent of the cases of colored boys and 35 percent of the cases of colored girls, as compared with 38 percent of the cases of white boys and 20 percent of the cases of white girls. This larger proportion of younger colored children undoubtedly has some influence on the differences in the reasons for reference to the court, and in the dispositions made in cases of white and colored children, as shown in tables 17 and 21 (pp. 21 and 27).

¹ Of the 143 courts reporting delinquency cases, only 78 (71 of which reported girls' cases) furnished information for correlating age and color.

² Less than 1 percent.

COLOR AND NATIVITY

Table 8 shows the color and nativity of the children dealt with in delinquency cases disposed of by 79 courts, and table 9 shows the nativity of the parents in cases of white native-born children, which constituted nearly three fourths of all the cases reported by the courts.

Colored boys were involved in about one fifth of the boys' cases and colored girls in about one fourth of the girls' cases. The majority of the colored children were Negroes, only 41 boys and 12 girls belonging to other races.²¹ Tables IIIA and IIIB (pp. 41 and 42), which give details as to color and nativity of children in cases reported by individual courts, show that much variation exists in the proportion of cases of colored children reported from different localities. In courts serving areas with a large Negro population cases of Negro boys and girls may constitute from one third to nearly two thirds of the cases brought to the court; as, for example, in the District of Columbia;

²¹ In this report Mexican children are classified as white, following the plan used in the 1920 census. In all future reports it is planned to classify Mexican children separately. In a few localities, such as San Diego and Lake County, Ind., a large number of Mexican children were brought to the court.

Fulton County, Ga.; Marion County, Ind.; Caddo Parish and Orleans Parish, La.; and Norfolk, Va.

Among the cases of white children only a few were of children of foreign birth. This is doubtless due in part to the fact that a smaller proportion of the foreign-born white population than of the native-born white population is of juvenile-court age.

TABLE 8.—*Color and nativity of boys and girls dealt with in delinquency cases disposed of by 79 courts during 1931*¹

Color and nativity of child	Delinquency cases			
	Boys		Girls

Color not reported.....	15		1	

¹ Of the 143 courts reporting delinquency cases, only 79 (72 of which reported girls' cases) furnished information on color and nativity.

Information is given in table 9 as to the nativity of the parents of the native-born white children in 33,629 cases of delinquent boys and in 5,561 cases of delinquent girls. In nearly half (47 percent) of the cases of native-born white boys one or both parents were foreign born. The proportion was somewhat smaller (37 percent) in the cases of native-born white girls. In a steadily expanding reporting area the character of the population served by the courts will change slightly from year to year, but the figures as to parent nativity obtained during a 5-year period show consistently that foreign-born parentage is less usual among delinquent native-born white girls than it is in a similar group of boys. Traditions in some nationality groups as to family control of the activities of girls may have some influence on this situation.

TABLE 9.—*Parent nativity of native white boys and girls*¹ *dealt with in delinquency cases disposed of by 79 courts during 1931*²

¹ Excludes cases of children for whom parent nativity was not reported.

² Of the 143 courts reporting delinquency cases, only 79 (72 of which reported girls' cases) furnished information on parent nativity.

PLACE CHILD WAS LIVING WHEN REFERRED TO COURT, AND MARITAL STATUS OF PARENTS

Tables 10 and 11 give information in regard to the home conditions of delinquent children. The cases reported in 1931, as well as those reported in each of the preceding years, give evidence of rather striking differences in the home conditions of boys and girls who had become delinquent. This difference between boys' and girls' cases is probably due to several factors.

TABLE 10.—*Place boys and girls were living when referred to court in delinquency cases disposed of by 79 courts during 1931*¹

In institution.....	241	1	133	2
In other place.....	461	1	138	2
Place not reported.....	2, 784	-----	519	-----

¹ Of the 143 courts reporting delinquency cases, only 79 (72 of which reported girls' cases) furnished information on place child was living when referred to court.

In two thirds of the boys' cases, but in less than one half of the girls' cases, for which this information was reported, the children were living with both their own parents when they were referred to court. A correspondingly larger proportion of the girls were living with one parent or were separated from both parents. Death of one or both parents had occurred in 21 percent of the boys' cases as compared with 30 percent of the girls' cases. In 10 percent of the boys' cases and in 17 percent of the girls' cases the parents were separated because of divorce, desertion of one parent, or other reason. The lack of normal family life may play a more significant part in the delinquency of girls than of boys. Boys may find it easier to develop compensating outside interests than do girls when home conditions are unsatisfactory. It is generally conceded that the difficulties which bring girls into court are usually more serious in character and probably more clearly related to home conditions than are the difficulties of boys.

TABLE 11.—*Marital status of parents, according to place child was living when referred to court, in boys' and in girls' delinquency cases disposed of by 79 courts during 1931*¹

Source not reported.....	146	-----

¹ Of the 143 courts reporting delinquency cases, only 79 furnished information on source of reference to court.

Some indication of the relationship of a court to the community may be gained from data on cases of delinquent children showing the proportion referred to the court by parents and relatives, other individuals, and social agencies. These proportions differ from one court to another because one court may be regarded as a general agency to deal with all conduct problems, whereas another court is considered as an agency to deal only with cases of marked conflict with public authority. Furthermore, in some localities all children brought to the attention of the police are referred to the court, whereas in other localities many cases are dealt with directly by the police. More than three fifths of the cases shown in table 12 were reported by the police. Parents and relatives or other individuals referred one fifth of the cases. School departments and probation officers were the next most important sources of reference.²²

Table IV (p. 43), which gives details for individual courts, shows that the police referred more than four fifths of the cases dealt with by six courts (Baltimore, Md.; Buffalo and Syracuse, N.Y.; Philadelphia and Montgomery County, Pa.; and Milwaukee County, Wis.); parents, relatives, and other individuals reported more than one third of the cases to another group of courts (Mobile County, Ala.; Dade County, Fla.; Marion County, Ind.; Polk County, Iowa; Caddo Parish, La.; and New York City, N.Y.). Great variation was found in the extent to which school departments were reporting cases to the courts. This probably reflects differences in the provision made by the schools for dealing with conduct problems of school children. In five courts (Lake County, Ind.; Rensselaer County and Westchester County, N.Y.; and Mahoning County and Montgomery County, Ohio), more than one fifth of the cases were referred by school departments.

PLACE OF CARE PENDING HEARING OR DISPOSITION

Table 13 gives information as to the places in which delinquent children were cared for pending hearing or disposition of their cases. It also shows the differences in the type of the detention care in different age groups. Proportionately, detention was used more often in cases of boys of 16 and 17 years of age, and in cases of girls of 18 years and older.

The type of detention care given varied according to the facilities available in the local community, detention homes or other institutions and jails or police stations being the places most frequently used. Detention homes were used in two thirds of the cases of children whom it was considered necessary to hold pending hearing or disposition of their cases. Of the 41 courts serving cities or counties of 100,000 or more population that reported detention care, 29 were using detention homes. Although a number of courts reported the use of institutions other than detention homes, including the institutional resources of private agencies, the majority of the cases in which children were so cared for were reported by the New York City court, where a cooperative arrangement exists with the Society for the Prevention of Cruelty to Children. (See table V, p. 44.) Boarding homes were

²² Some courts may have reported the person signing the petition rather than the person making the original complaint, thus reporting "probation officer" as the source in cases actually referred by others.

used for a small number of cases only, and more often for girls than for boys. A jail or police station was used for detention in 8 percent of the boys' cases and in 2 percent of the girls' cases.

¹ Of the 143 courts reporting delinquency cases, only 79 (72 of which reported girls' cases) furnished information for correlating place of detention care and age of child.

² Less than 1 percent.

³ Includes cases of children cared for part of the time in detention homes and part of the time elsewhere, but excludes cases of children also held in jails or police stations.

⁴ Includes a few cases of children cared for part of the time in jails or police stations and part of the time elsewhere.

⁵ Includes a few cases of children held in more than one place of care but in places other than detention homes, jails, or police stations.

Little difference was found in the types of detention care given to boys and girls in the two age groups under 16 years, although detention in a jail or police station was used more often for boys of 14 and 15 years of age than for girls of these ages (table 13). A smaller proportion of boys and girls of 16 and over than of those under 16 were

given care in detention homes and other institutions and a larger proportion were held in jails or police stations.²³

Jails or police stations were used for detention in 25 percent of the cases of boys of 16 and 17 years old who needed detention, and in 38 percent of the cases of boys of 18 years and over. Comparison with figures obtained in 1929 and 1930 shows that the proportion of cases of boys of 16 years and over detained in jail has steadily decreased. Changes or extension in detention facilities, which have made it possible to hold children in other places than jails, have contributed to this decrease. For example, in one court the number of cases of children detained in jails or police stations was 201 less in 1931 than in 1930 because of changes in the detention home, which provided greater security against escape.

Some differences were found in the use of detention in cases of white and colored children. Detention of the boy or girl away from home pending hearing or disposition was thought to be necessary in a larger proportion of the cases of colored children than of white children. This greater use of detention for colored children is notable in every age period. The types of detention facilities used for colored children differed little from those used for white children. However, jail detention was found proportionately less often in cases of colored children than of white children, due perhaps to the smaller proportion of colored children than of white children who were 16 years of age or more.

NUMBER OF TIMES CHILDREN WERE REFERRED TO COURT

A problem of special concern to juvenile courts is the extent to which children are returned to the court for repeated delinquencies. Some information on this subject is given in table 14. The 56,110 delinquency cases dealt with by the 79 courts that reported on this point affected 49,460 children, 41,824 boys and 7,636 girls. More than one fifth of these children (11,201) had been dealt with also in a previous year. This number does not represent, however, the total number of children who had been brought before the court more than once, since 6,650 cases, 12 percent of the total number, represented recurrences of delinquency during the year. It is impossible to tell the actual number of children involved in these 6,650 cases, as a few children may have been returned to the court several times during the year for different offenses, whereas others may have been returned only once.

TABLE 14.—*Previous court experience of boys and girls dealt with in delinquency cases disposed of by 79 courts during 1931*^a

Previous court experience	Delinquency cases		
	Total	Boys	Girls
Total cases	56, 110	47, 956	8, 154
Child never previously dealt with	38, 259	31, 753	6, 506
Child last dealt with in a previous calendar year	11, 201	10, 071	1, 130
Child last dealt with in this calendar year	6, 650	6, 132	518

^a Of the 143 courts reporting delinquency cases, only 79 (72 of which reported girls' cases) furnished information on previous court experience.

²³ A few courts stated that a "detention room" for children was located in the courthouse or in the jail. Detention in a special room of the courthouse was classified as "other", but detention in the same building as the jail was classified as detention in jail.

A larger percentage of the boys (24) than of the girls (15) had been dealt with by the court in a previous year. A similar difference is found in the percentage of cases of boys and of girls that involved recurrences of delinquency during 1931. Thirteen percent of the boys' cases, as compared with 6 percent of the girls' cases, represented additional offenses committed during the year.

REASONS FOR REFERENCE TO COURT

The character of the offenses for which children are brought into court is shown in table 15. Information as to the reason for reference was obtained from all the reporting courts. In nearly half of the boys' cases (45 percent) the boys were sent to court for some type of stealing. In another large group of cases (30 percent) they had been charged with committing acts of carelessness or mischief or with traffic offenses, which also are due to carelessness or irresponsibility.²⁴ It is generally accepted that the reasons for which boys are referred to court represent delinquency problems different from those which bring girls into court. The closely related offenses of running away, being ungovernable, and sex offenses were reported in nearly two thirds (63 percent) of the girls' cases, whereas stealing and acts of carelessness and mischief were the reasons for reference to the court in a much smaller proportion of the cases (23 percent). Although the actual number of boys charged with truancy and running away was larger than the number of girls, such cases constituted a much smaller percentage of the boys' cases. A larger percentage of the boys' cases than of the girls' cases involved injury to persons and traffic violation, but the percentage of cases dealt with because of the use, possession, or sale of liquor or drugs was the same for boys and for girls.

^a Of the 143 courts only 139 reported boys' cases and 110, girls' cases.

^b Less than 1 percent.

²⁴ In 1927, 1928, and 1929 "traffic violation" was included under "acts of carelessness and mischief."

Although an attempt is being made to secure uniformity in the use of terms, the reasons reported for referring children to courts as delinquents give a very incomplete picture of their behavior problems. A child may have committed several offenses at or about the same time and yet be referred to court for only one of them. The specific offense for which he is referred may be much less serious than the offenses discovered in the court by the social investigation. When the case is investigated before the filing of a petition instead of afterward, the formal charge is usually more accurate, but even in such cases the offense stated in the complaint may reflect the desire of the court to protect the child. For example, a girl may be charged with incorrigibility instead of a sex offense, a boy with mischief instead of stealing, or a charge of burglary and entry may be reduced to trespassing and taking the property of another. These differences in the attitudes and practices of the court are apparent in the proportion of cases referred for various reasons by the different courts. (See tables VIa and VIb, pp. 45 and 46.)

Table 16²⁵ shows that the type of offenses committed by children varies with their age, reflecting changing interests and pursuits. As the largest number of cases were those of children 14 and 15 years of age, the number of cases of each type of offense, except traffic violations, was largest in this age group. Within each age group, however, certain types of offenses were more usual than others. The offenses committed by girls under 12 years of age correspond somewhat more closely to those committed by boys of similar age than did the offenses of older girls to those of older boys. As would be expected, a larger proportion of the children under 12 years of age than of those in any other age group were brought before the court for acts of carelessness and mischief. Stealing was the major offense in boys' cases in all age groups except under 10 years, although the type of stealing changed as the boys grew older. Older boys were more often charged with automobile stealing and with stealing or attempted stealing from a person, accompanied by intimidation or violence, whereas other types of stealing, including minor thefts and shoplifting, were reported more often in cases of younger children. The percentage of cases of girls who ran away, were ungovernable, or committed sex offenses was much larger in the older age groups, the charge of sex offense being used most often in cases of girls of 18 years of age or over.

Table 17 shows the types of offenses reported in cases of white and colored children. As has been shown on page 11, a larger proportion of the colored children than of the white children were under 14 years of age, and it is probable that this difference in age distribution is reflected in the offenses reported. A slightly larger percentage of the cases of colored boys (59) than of cases of white boys (52) were referred for "other" stealing and acts of carelessness or mischief, offenses that are proportionately more often reported in cases of younger than of older boys. In the majority of cases of colored boys, however, "other" stealing had been the charge made, whereas in cases of white boys charges of acts of carelessness or mischief predominated. Automobile stealing and traffic violation, both of which are offenses of older boys, were reported in a much smaller percentage of cases of colored boys than of white boys. In girls' cases a similar situation

²⁵ The totals in table 15 do not agree with those in tables 16 and 17, as detailed information was available for only 79 courts.

is found. Twenty-seven percent of the cases of colored girls, as compared with only 18 percent of the cases of white girls, involved "other" stealing or acts of carelessness or mischief, offenses with which girls under 14 were more often charged. A larger proportion of colored girls than of white girls were referred to the court because of being ungovernable, and a smaller proportion were referred for sex offenses.

¹Of the 143 courts reporting delinquency cases, only 79 (72 of which reported girls' cases) furnished information for correlating reason for reference to court and age of child.

A smaller percentage of colored children than of white children were referred for truancy. Three fourths of the cases of colored children were reported by nine courts.²⁶ It is probable that the small amount of reported truancy among colored children is influenced by the methods of dealing with truancy problems in these nine localities. Children had been referred to the court for truancy in only 4 percent of the cases reported by these courts, as compared with 6 percent of the cases reported by the entire number of courts. The development of special facilities in the schools for constructive work with truants,

²⁶ District of Columbia; Fulton County, Ga.; Orleans Parish, La.; Baltimore, Md.; Wayne County, Mich.; New York City, N. Y.; Franklin and Hamilton Counties, Ohio; and Philadelphia, Pa. Each of these courts reported more than 400 cases of colored children.

and the practice in some courts of proceeding against the parents rather than of dealing with the child, are measures that reduce the number of children brought to court on the charge of truancy. It is possible of course that in some of these communities less attention is paid to the absence of colored children from school.

¹ Of the 143 courts, only 139 reported boys' cases and 110, girls' cases.² 69 courts reported unofficial cases.³ Less than 1 percent.

The dispositions used by the courts have been classified into three major groups: (1) The court retained responsibility for the child and provided some form of care to assist him in overcoming his conduct difficulties; (2) the case was dismissed, responsibility for care of the children was transferred to an institution, agency, or individual, or some other final settlement of the case was made; (3) the case was held open so that the child could be brought back to the court if further difficulties developed, although such difficulties were not anticipated. The use of these three types of disposition varied greatly in the individual courts. (See tables VIIIA and VIIIB, pp. 48 and 50.) The court retained responsibility for only a small proportion of the children in a few localities, notably in Orleans Parish, La.;²⁷ Baltimore, Md.; Buffalo, N.Y.; Philadelphia, Pa.; and Spokane County, Wash. On the other hand, in a few localities, such as Mercer County, N.J.; Syracuse, N.Y.; and Allegheny County, Pa., the court retained responsibility for the children in the majority of the cases. Holding the case open without anticipation of further action was used more often in Fulton County, Ga.; Marion County, Ind.; Orleans Parish, La.; and Hennepin County, Minn., than in other localities.

Table 18 shows that in about one third of the cases the children had remained under supervision of the court. In the largest proportion of these cases the children had been under care of probation officers in their own homes or other family homes. In the remaining cases in this group immediate care was given by an institution or agency. Reports of cases dismissed from supervision by the courts (see p. 35) show that in many cases in which the children were receiving care from an institution or agency while the court retained responsibility, the children after a period of temporary care, usually in an institution,²⁸ were returned to their homes under care of probation officers. In 62 percent of the boys' cases and in 59 percent of the girls' cases the courts did not retain responsibility for the children. The majority of these children were dismissed, usually after a warning had been given or some adjustment of the difficulty had been made.

Dismissals, either with or without warning or adjustment, and orders of restitution, fine, or costs²⁹ were proportionately more frequent in boys' cases than in girls' cases, whereas commitments or referrals to institutions or agencies were more frequent in girls' cases.

Marked differences are found in the types of disposition used in official and unofficial cases. In boys' cases 72 percent of the unofficial cases as compared with 29 percent of the official cases were dismissed. A similar situation is found in cases of girls, 58 percent of the unofficial cases as compared with 18 percent of the official cases being dismissed. As the majority of cases of children referred but not committed to institutions and of cases of runaways returned to their homes were dealt with unofficially, these dispositions were proportionately more often used in unofficial cases.

²⁷ Although no cases were reported as retained under the supervision of the court in Orleans Parish, La., children had been under supervision of probation officers in a number of cases classified as being "held open without further action."

²⁸ A large proportion of the children placed under care of an agency while remaining under supervision of the court were cared for in an institution maintained by the agency.

²⁹ The relative use of orders for restitution or for payment of fine or costs was available only for the 79 courts reporting separately on these two types of orders. Of the total group of 1,839 cases of boys and 64 cases of girls in which orders for restitution, fines, and costs were made by these courts, payment of fines or costs was required in 1,014 cases of boys and 35 cases of girls.

Although more than a third of the delinquency cases had been dealt with unofficially, less than half of the courts reported unofficial cases, 20 of these being courts serving areas of 100,000 or more population. (See table VII, p. 47.) In many of these courts the majority of the cases reported were unofficial; seven courts (Franklin County, Hamilton County, Mahoning County, and Montgomery County, Ohio; Multnomah County, Oreg.; Philadelphia, Pa.; and Milwaukee County, Wis.) had dealt with 68 to 96 percent of their cases in this way.

Many factors are taken into consideration in making disposition of a child's case. The particular needs of a child, his home situation, and the character and number of his previous delinquencies are of major importance in deciding upon the treatment that is needed. Information is not available, however, for statistical study of these factors. The relationship of the age of the child and of his immediate offense to the disposition made by the court are shown in tables 19 and 20.³⁰

It is to be expected that the dispositions of cases of children under 12 years of age, especially those of children under 10, would be somewhat different from the dispositions made of cases of older children. Table 19³¹ shows that a larger proportion of cases of younger children were dismissed after warning or adjustment of the difficulty or were held open without further action being anticipated. Supervision by probation officers was used more often in cases of children between 12 and 16 years of age than in those of children of other age groups. The percentage of cases of children of these age groups committed or referred to an institution was also slightly larger than in other age groups. Further analysis of the figures reveals that the proportion of children committed to State institutions for delinquent children and to penal institutions increased steadily as the ages of the children increased. Ninety boys and one girl had been committed to penal institutions. The ages of 20 of these children were not given, but of the remainder 16³² were under 16 years of age at the time of commitment. Orders of restitution, fines, or costs were used in about the same proportion of cases in all age groups. Return of runaways and referral to another court constituted a large proportion of the cases classified as "other" dispositions. Referral to another court was used more often in cases of older boys and girls, which accounts for the larger proportion of "other" dispositions in cases of children 16 years of age or older.

Table 20 shows the relation between the types of offenses committed by boys and girls and the dispositions of their cases. The majority of the boys placed under supervision of probation officers or committed or referred to institutions, agencies, or individuals had been referred to the court in cases of stealing. The majority of the girls given these types of treatment had been charged with the closely allied offenses of running away, being ungovernable, or sex offenses. As would be expected, a large majority of the orders for restitution, fines, or costs were made in cases of stealing or acts of carelessness or mischief. Return of runaways and referral to another court are the most im-

³⁰ The totals in table 18 do not agree with those in tables 19 and 20, as detailed information for these tables was available for only 79 courts.

³¹ In tables 19, 20, and 21 dispositions have been grouped so as to show the type of care given without regard to retention of responsibility by the court.

³² Caddo Parish, La., 10 cases; Norfolk, Va., 3 cases; New York City, 2 cases; First District, Utah, 1 case.

portant of the dispositions classified as "other." Of the 426 cases of boys and girls referred to other courts, 239 had been referred for stealing.

¹ Of the 143 courts reporting delinquency cases, only 79 (72 of which reported girls' cases) furnished information for correlating disposition of case and age of child.

Some differences in the types of dispositions reported in cases of white and colored children are shown in table 21. Cases of white boys were more frequently disposed of by dismissal or indefinite continuances than were those of colored boys, and reference or commitment to an institution or to the care of an agency or individual was more frequent in the cases of colored boys. The opposite situation is to be found in girls' cases, dismissal or indefinite continuance being more frequent and agency or institutional care less frequent in cases of colored girls than of white girls. Return of runaways and referral to other courts included in "other" dispositions were used proportionately less often in cases of colored children than of white children.

DEPENDENCY AND NEGLECT CASES

An analysis of dependency and neglect cases brought before 16 ³³ courts serving areas of 100,000 or more population, which had reported such cases to the Children's Bureau during a 5-year period, shows that little change has occurred in the total number of dependency and neglect cases that had been dealt with. In a few courts there had been a slight but steady decrease in cases during the period and in others a slight increase. For the 16 courts the figures for the five years beginning with 1927 were 9,744 cases, 10,451 cases, 10,441 cases, 10,797 cases, and 10,518 cases.

In some of the smaller courts reporting cases in 1931, especially those serving rural areas, most of the court work was concerned with dependency problems. The large number of dependency cases in most of the small Alabama counties was due to the unofficial cases dealt with by the county welfare workers who also served as probation officers of the juvenile court. In most courts serving areas having 100,000 population or more and including cities which have a number of social agencies caring for children, the major activity of

³³ Bridgeport, Conn.; District of Columbia; Lake and Marion Counties, Ind.; Hennepin and Ramsey Counties, Minn.; Buffalo, Erie County, New York City, and Westchester County, N.Y.; Hamilton and Mahoning Counties, Ohio; Montgomery County and Philadelphia, Pa.; Norfolk, Va.; and Pierce County, Wash. Franklin County, Ohio, was omitted from this summary as unofficial cases were not reported before 1930.

the court was in connection with delinquency cases, but in four such areas (Allegheny County, Pa.; San Francisco County, Calif.; Dade County, Fla.; and Westchester County, N.Y.) the number of dependency and neglect cases exceeded the number of delinquency cases. (See table I, p. 38.)

In many cases brought to the juvenile court, neglect and unsatisfactory conduct are closely allied. Whether such cases will be dealt with as delinquency or as dependency and neglect depends upon the attitude of the court. One illustration of this is the increasing use of neglect rather than delinquency charges in Westchester County, N.Y., which has had some influence on the steadily dropping delinquency rate in this county, and the consequently increasing proportion of cases designated as neglect. The large number of dependency and neglect cases in Pittsburgh and San Francisco illustrates two different situations that may be found also in other courts. The juvenile court of Allegheny County, Pa., has undertaken a child-caring program for dependent children, including placement in family homes. In 871 of the 909 cases of dependent children dealt with by this court in 1931 the child was retained under the care of the probation officer. This public child-caring division is a separate administrative unit but is still maintained under the jurisdiction of the court. A large majority of the dependent children dealt with in 842 cases in San Francisco County were brought before the court in order to obtain county funds for their care. The statutes provide that the court may order the county to pay for the support of any ward of the court needing care. This provision enables the court to provide county funds for the care of children when custody is given to private child-caring agencies. The necessity for court commitment in order to obtain county funds for the support of children similarly affects the number of dependent children dealt with by the courts in counties having a county children's home or a public welfare agency that lacks authority to accept custody of children without commitment, as, for example, in Milwaukee and the District of Columbia. Limitation in county funds may be one of the reasons that no great increases have taken place in dependency cases brought to the juvenile court in 1931.

CHILDREN INVOLVED IN THE CASES

AGE, COLOR, AND NATIVITY

Table 22 gives information as to the age of children dealt with in dependency and neglect cases by 140 courts. Nearly as many girls as boys were dealt with in these dependency and neglect cases, and the children were distributed fairly evenly in the age groups under 14 years. The number who were 14 and 15 years of age was slightly smaller than the number in the lower age groups, and the number 16 years of age or older was very small.

Information as to color and nativity was available for only 77 courts. As is shown in table 23, the great majority of the children concerned in dependency and neglect cases were white. In more than half of the cases the children were white native born of native parentage, the next largest group being white native born of mixed or foreign parentage. The foreign-born group was small. The character of the population served by the court affects the number of cases of children

belonging in these different groups that are brought before the court. Table IX (p. 52), which gives the details for individual courts, shows that nearly two thirds of the cases of foreign-born children were reported by New York City. One or both of the parents were foreign born in more than 50 percent of the cases of white children reported by 6 courts (Bridgeport, Conn.; Lake County, Ind.; Wayne County, Mich.; and Monroe County, Westchester County, and New York City, N.Y.).

TABLE 22.—*Age of children dealt with in dependency and neglect cases disposed of by 140 courts during 1931*

Other colored.....	84	47	37
Color not reported.....	1	-----	1

¹ Of the 140 courts reporting dependency and neglect cases, only 77 (75 of which reported girls' cases) furnished information on color and nativity.

The cases of colored children reported included 2,886 cases of Negro children and 84 cases of colored children of other races. Marked variation may be found in different localities in the extent to which dependent Negro children are brought into court. (See table IX, p. 52.) Ten courts serving areas in which 10 percent or more of the

population were Negroes reported at least 100 cases of dependency and neglect. In six of these areas (District of Columbia; Marion County, Ind.; Orleans Parish, La.; Baltimore, Md.; Franklin County, Ohio; and Philadelphia, Pa.) the percentage of Negro children brought before the court was larger, in some courts twice as large, as the percentage of Negroes in the general population. In the four remaining areas (Dade County, Fla.; Fulton County, Ga.; Caddo Parish, La.; and Norfolk, Va.) decidedly less use was made of the court for dependent Negro children in proportion to the number of Negroes in the area.

PLACE CHILD WAS LIVING WHEN REFERRED TO COURT, AND MARITAL STATUS OF PARENTS

More than three fourths of the children dealt with in dependency and neglect cases for which information as to the whereabouts of the child was reported were living in their own homes when brought to court. Table 24 shows that most of these children were living with both their own parents or with their mother, a smaller number living with the father or with one parent and a step-parent. In most of the 4,482 cases of children not in their own homes, the child had been living with other family groups, often with relatives.

TABLE 24.—Marital status of parents, according to place child was living when referred to court, in dependency and neglect cases disposed of by 77 courts during 1931¹

Status not reported	2, 423	73		12	11	37	13	123	39	27	2, 161

¹ Of the 140 courts reporting dependency and neglect cases, only 77 furnished information on marital status of parents and place child was living when referred to court.

The marital status of the parents of the children is also shown in table 24. The parents in 28 percent of the cases were married and living together. In 37 percent they were separated for various reasons, divorce and desertion being the reasons in about one half of these cases. Among other reasons for separation were physical or mental disability or imprisonment of one of the parents. In 25 percent of the cases one or both of the parents were dead, and in 10 percent they were not married to each other.

In 42 percent of the cases in which the parents were not married to each other, and in 36 percent of those in which the mother only was dead, the children were receiving care away from their own homes when brought into court. Nearly half of the children under care of institutions belonged in these two groups. Care of children away from their own homes had been given also in about a fourth of the cases in which the parents were divorced (24 percent) or separated for other reasons (27 percent). Only a small percentage of the children had been separated from the remaining parent in cases in which one parent had deserted or the father had died.

REASONS FOR REFERENCE AND SOURCES OF REFERENCE TO COURT

Several children in a family may be referred to court at the same time and for the same reason. The families represented, as well as the children's cases, are shown in table 25, each family being counted only once for each time it was dealt with by the court on a new complaint involving one or more of the children. Only cases dealt with by the 77 courts that reported detailed information are included in table 25, as information as to families was not available for the 704 cases reported by the remaining 63 of the 140 courts reporting dependency and neglect cases. These family figures, however, are probably representative, as comparison of children's cases reported by the 77 courts and by the entire 140 courts shows that the percentage distribution of reasons for reference of cases was practically identical in both groups.

TABLE 25.—Reason for reference to court and families represented in dependency and neglect cases disposed of by 77 courts during 1931¹

Reason for reference to court	Dependency and neglect cases		
	Total cases	Families represented	
		Number	Percent distribution
Total cases.....	21, 613	11, 353	-----
Reason reported.....	21, 607	11, 349	100
Without adequate care or support from parent or guardian.....	16, 735	8, 516	75
Abandonment or desertion.....	1, 352	762	7
Abuse or cruel treatment.....	465	284	3
Living under conditions injurious to morals.....	2, 271	1, 104	10
Physically handicapped and in need of public care.....	759	672	6
Other reasons.....	25	11	(?)
Reason not reported.....	6	4	-----

¹ Of the 140 courts reporting dependency and neglect cases, only 77 furnished information on number of families represented.

² Less than 1 percent.

Two of the classifications shown in table 25 (abuse or cruel treatment and living under conditions injurious to morals) designate situations almost universally called neglect. Twelve percent of the families were brought into court on these charges. The classifications "without adequate care or support from parent or guardian",

and "abandonment or desertion", which were used for 82 percent of the cases, seem to have been variously interpreted by the different courts. Table X (p. 53), which gives details for individual courts, shows that nearly half of the total number of cases of abandonment and desertion were reported by Philadelphia. It is probable that in other courts many cases involving desertion were classified under the more general heading, as the immediate problem was lack of support. The New York City court having jurisdiction over neglect cases only reported 1,779 cases without adequate care or support (88 percent of its total cases) and 26 cases of abandonment or desertion (1 percent), whereas the Philadelphia court responsible for both neglect and dependency cases reported 1,192 cases under the first of these classifications (68 percent of its total cases) and 358 cases (20 percent) under the second. Physical handicaps of one or more children was the reason for 6 percent of the families coming before the court.

The following list shows the number of families referred to the courts by different individuals or agencies:

Source of reference	Number of families
Total.....	11, 353
Parents or relatives.....	3, 996
Social agency.....	3, 682
Individual.....	1, 205
Police.....	1, 069
Probation officer.....	803
School department.....	409
Other sources.....	92
Source not reported.....	97

It is to be expected that parents or relatives and social agencies would refer most of the dependency and neglect cases. In some localities the court prefers to have such cases investigated first by a social agency so that only those actually needing court action are brought to court. In other localities the court undertakes the initial work and receives complaints from any interested persons, including parents and relatives.

DISPOSITIONS

In more than a third of the dependency cases, as shown in table 26, the court assumed responsibility for the continued care and supervision of the child. Table XI (p. 54) shows, however, that the policies as to retaining responsibility varied greatly in the individual courts. In 8 courts (Mobile County, Ala.; Bridgeport and New Haven, Conn.; Orleans Parish, La.; Buffalo, Erie County, and Rensselaer County, N.Y.; and Fayette County, Pa.) no children were retained under supervision of the court, whereas in 9 courts (District of Columbia; Marion County, Ind.; Wayne County, Mich.; Hennepin County and Ramsey County, Minn.; Allegheny County and Montgomery County, Pa.; Pierce County, Wash.; and Milwaukee County, Wis.) the court retained responsibility for the majority of the cases, varying from more than a half to practically all of the cases. Supervision of the child in his own home or in other family homes by probation officers was used in 4,313 cases (19 percent), nearly half of these cases being in New York City and Allegheny County, Pa. Cooperation between the court and some public or private child-caring agency or institution, whereby the agency or institution or individual provided the care for the child and the court retained responsibility for the

care and for work with the family, was used for 3,417 cases (15 percent). Almost two thirds of the cases in which the child was cared for by cooperative supervision were reported by 7 courts (District of Columbia; Wayne County, Mich.; Hennepin County and Ramsey County, Minn.; New York City, N.Y.; Multnomah County, Oreg.; and Milwaukee County, Wis.).

¹ 47 courts reported unofficial cases.

² Less than 1 percent.

Among the cases for which the courts did not retain responsibility were 5,090 (23 percent) that were dismissed after a warning had been given or some adjustment of the problem had been made and 1,030 (5 percent) in which the court held the case open but anticipated no further need for action. In a few courts such disposition had been made in one third to more than one half of the cases, whereas in other courts definite action had been taken in a large majority of the cases. Although an equal number of official and unofficial cases had been dismissed or adjusted, such cases constituted 56 percent of the unofficial cases but only 14 percent of the official cases.

Commitment to child-caring agencies or institutions or to individuals was made in 6,744 cases (30 percent), and the child was referred to such agencies or persons without commitment in 1,233 cases (6 percent). Table XI (p. 54) shows that there was wide variation in the courts as to the use of commitment or referral of children to institutions or agencies. In a few localities, notably Mobile, Ala.; San

Francisco County, Calif.; Buffalo, Syracuse, Monroe County, and Rensselaer County, N.Y.; and Fayette County, Pa., it is evident that few children had been brought into court in cases of dependency or neglect, unless there was need for court authority for transfer of custody to an institution or agency.

OTHER TYPES OF CHILDREN'S CASES

Twenty-four courts serving areas of 100,000 or more population, and 11 serving less populous areas reported other types of children's cases dealt with during the year in addition to delinquency, dependency, and neglect cases. (See table I, p. 38.) Nearly two thirds of the 1,116 cases reported as "special proceedings" had been dealt with by the court in Philadelphia, Pa. The largest number of cases (364) were concerned with the commitment of feeble-minded children to institutions, or with making other provisions for the care of these children. The next largest group (293) involved children dealt with as material witnesses; such cases were reported by only five courts (Fulton County, Ga.; New York City and Westchester County, N.Y.; Hamilton County, Ohio; and Philadelphia, Pa.) Petitions for adoption had been under consideration in 226 cases, of which all but 25 were heard in the Philadelphia court.³⁴ The question of custody of the child was the major problem in 183 cases. Some of these involved the appointment of a guardian and others the settlement of disputes as to custody. Other types of problems under the jurisdiction of the court were involved in 50 cases, including granting permission for a minor to marry or a boy to enlist in the Army or Navy.

CASES OF CHILDREN DISCHARGED FROM SUPERVISION

Cases of children discharged from supervision were reported by 34 courts serving areas of 100,000 or more population and by 67 courts serving areas with smaller population. These courts terminated supervision of 13,150 cases of delinquent children, 4,192 cases of dependent and neglected children, and 14 cases of other types. This last group has not been included in the following discussion or in tables 27 or 28 but is included in table I (p. 38). In a large majority of these cases the children had been placed under official supervision, but 740 cases of delinquency and 343 cases of dependency and neglect had been dealt with unofficially.³⁵

REASONS FOR DISCHARGE, AND CONDUCT WHILE UNDER SUPERVISION

Table 27 gives information as to the reasons the children were discharged from supervision. In the largest percentage of delinquency cases (64) and of dependency and neglect cases (62) the children were discharged because of satisfactory conduct or because conditions had improved. Fulfillment of a particular court order or expiration of a definite period of supervision were the reasons for discharge in

³⁴ The courts were instructed to report cases as "adoption proceedings" only if the juvenile court had the authority to grant or deny adoption petitions. In a number of the cases reported as dependency or neglect the court took some part in adoption proceedings, such as giving consent to adoption or declaring a child eligible for adoption, although the adoption was actually granted in another court.

³⁵ Information as to the method of dealing with supervision cases was not available for Philadelphia, Pa., or for the State of Connecticut, exclusive of Bridgeport.

12 percent of the delinquency cases but for only 2 percent of the dependency and neglect cases. Placement of children under supervision for a definite period of time is a procedure used by a few courts but not by others. More than two-thirds of all delinquency cases so dealt with were reported by the courts in Hudson County and Mercer County, N.J., and Philadelphia, Pa. (See table XII, p. 56.) In 16 percent of the delinquency cases, and in 26 percent of the dependency and neglect cases, failure of the child to improve satisfactorily in conduct while under supervision, or continuance of unsatisfactory conditions affecting him, resulted in commitment to an institution or agency for further supervision, or in a decision to discharge the child in spite of unsatisfactory conduct or conditions as further supervision seemed undesirable. Reference to another court, inability to locate the child, removal from jurisdiction of the court, and other reasons were reported as the cause of discharge in 9 percent of the delinquency cases and in 10 percent of the dependency and neglect cases. (See table XII (p. 56) and XIII (p. 57).)

¹ Of the 101 courts reporting supervision cases, 96 courts reported delinquency cases and 54 reported dependency and neglect cases.

Information was received from 57 courts as to whether complaints of misconduct of the children had been received during the time that they were under supervision by the court. Of 9,618 cases of delinquency for which this information was given, complaints had been received in only one fifth (1,900 cases).

These same 57 courts also reported on changes that had been made in the type of supervision given. Information on this item was more complete, being available for all the 11,046 cases of delinquency reported. Changes in the type of supervision had been made in 859 cases, nearly three fourths of these being reported by the District of Columbia; Hennepin County, Minn.; and New York City. In the largest number of cases (387) the child, although under supervision

of the court, had been placed under care of an institution or agency and after a period of intensive care had been returned to his home under supervision of the probation officer. In 125 cases the child had been under care of the probation officer but was transferred to an institution or agency for care until the time of discharge. Transfer of supervision from an agency or individual to an institution, or the reverse, had been used in 7 cases. More than one change in type of supervision had been necessary in 340 cases.

LENGTH OF TIME UNDER SUPERVISION

The length of time that the children were under supervision in delinquency and in dependency and neglect cases is shown in table 28. In two thirds of the dependency and neglect cases and in nearly three fourths of the delinquency cases the child had been under supervision less than a year, the larger number for less than 6 months. Some interesting differences are to be found in tables XIV and XV (pp. 58 and 59) in the length of the period of supervision in individual courts. In all the cases of delinquent children discharged by three courts ³⁶ (Mobile County, Ala.; Dade County, Fla.; and Syracuse, N.Y.) the children had been under supervision less than one year. Supervision of children for periods of three or more years was reported, however, by a number of courts. The majority of cases of delinquent children under supervision for this length of time had been under care of three courts (Mercer County, N.J.; Montgomery County, Ohio; and Philadelphia, Pa.). Supervision had been extended through three or more years in a number of dependency and neglect cases in San Francisco County, Calif.; Wayne County, Mich.; Hennepin County, Minn.; and Philadelphia, Pa.

TABLE 28.—*Length of time child was under supervision in cases of delinquent and of dependent and neglected children discharged from supervision by 101 courts during 1931* ^a
